

PRIVACY NOTICE

e-citizen Ghana

1. Purpose and scope

This Privacy Notice explains how Biosec Solutions Limited collects, uses, discloses, stores and protects Personal Data when operating e-citizen Ghana through e-citizen.africa/gh and related websites, applications, APIs, communications and verification services.

It applies to Platform Users who create an Account or submit a request, Verification Subjects whose information is requested, visitors, business contacts and persons who communicate with us. A Source Institution may separately act as controller of the underlying record and should provide its own privacy information.

2. Controller and contact

Biosec Solutions Limited (RC 901419) is incorporated in Nigeria and is the cross-border operator. It ordinarily acts as controller for Account, payment, security, support and Platform-administration processing. Depending on a source arrangement, Biosec may act as an independent controller, joint controller or processor for a particular verification flow. Biosec is not presently incorporated in Ghana; the country brand is not a separate legal entity.

Data Protection Officer: gh-info@e-citizen.africa. General enquiries: gh-info@e-citizen.africa. Where applicable law requires a foreign-controller registration, authorisation or local representative, Biosec will complete the applicable step and publish the registration or representative details on e-citizen.africa/gh.

3. Applicable law and regulator

We process Personal Data in accordance with Data Protection Act, 2012 (Act 843) and other applicable privacy, consumer, cybersecurity, electronic-transactions and sector-specific requirements. The relevant privacy regulator is the Data Protection Commission of Ghana (DPC) (dataprotection.org.gh).

4. Categories of people and information

Person / activity	Information that may be processed
Platform User	Name, email, telephone number, login identifier, authentication data, language, organisation, role and account preferences.
Verification Subject	Search identifier, Ghana Card or VIN-related identifier, name, consent or authentication status, and the result returned by the relevant Source Institution.

Person / activity	Information that may be processed
Service and device use	IP address, device, browser, operating system, approximate location, session, cookie identifiers, timestamps, pages, errors and security events.
Payments	Amount, currency, transaction reference, gateway response, payment status, refund or wallet record. Biosec ordinarily does not store full card credentials.
Support and compliance	Messages, call or ticket records, complaints, rights requests, authority documents, fraud indicators, audit records and investigation information.
Business or API use	Organisation details, authorised users, API keys, request logs, billing contacts and contract records.

5. Where information comes from

- directly from the Platform User or Verification Subject;
- from the person or organisation initiating a lawful request;
- from government agencies, statutory bodies and authorised Source Institutions;
- from identity, vehicle or other appropriately authorised data providers, where applicable;
- from payment gateways, banks and mobile-money providers;
- from social-login, authentication, communications, hosting, analytics, fraud-prevention and security providers;
- from devices and browser technologies; and
- from public authorities, professional advisers or another person where lawful and necessary.

Biosec generally does not obtain verification records by connecting directly to a government database. It submits the minimum required search data to contracted verification and data-access providers, currently including Smile ID, Prembly IdentityPass and Mono where applicable. A provider may query a Source Institution directly or through an authorised upstream partner.

The typical data flow is: the user or Verification Subject provides information to Biosec in Nigeria; Biosec transmits the required fields to the provider; the provider queries the relevant source or upstream partner; a limited response returns to Biosec; and Biosec displays it to the authorised user for the stated access period.

Biosec requests country- and Service-specific evidence of each provider's legal authority, source, onward-sharing permission, controller/processor role, retention and international-transfer basis. A provider or Source Institution may process some information as an independent controller, in which case its legally required privacy notice and rights process may also apply.

6. Purposes and lawful bases

Purpose	Typical lawful basis
Create and administer an Account; provide a requested Service	Performance of a contract; steps requested before a contract.

Purpose	Typical lawful basis
Verify identity or information and deliver a result	Consent where required; contract; legitimate interests; legal obligation; or another basis permitted by applicable law and the Source Institution.
Record consent, authority, access and audit events	Legal obligation; legitimate interests in accountability, security and dispute resolution.
Process payments, refunds and reconciliation	Contract; legal obligation; legitimate interests in fraud prevention and accounting.
Secure the Platform and investigate misuse	Legal obligation; legitimate interests in cybersecurity, fraud prevention and protection of users and Source Institutions.
Support, complaints and data-subject rights	Contract; legal obligation; legitimate interests in service quality and legal claims.
Analytics and service improvement	Legitimate interests, or consent where required for non-essential cookies or tracking.
Marketing	Consent or another lawful opt-out basis where permitted. Verification Results are not used for behavioural advertising.
Comply with law and protect legal rights	Legal obligation; public-interest requirement; establishment, exercise or defence of legal claims.

7. Consent and authority

Where consent is required, it must be freely given, specific, informed and unambiguous. We record the method, time and status. Consent may be refused or withdrawn through the applicable flow or by contacting the DPO. Withdrawal does not affect prior lawful processing and may prevent completion of a consent-dependent Service.

A Platform User initiating a request must have an independent lawful purpose and any required authority. Biosec may request evidence and suspend access where misuse is suspected.

8. Service-specific processing

The Services currently offered are Ghana Card (Ghana ID) verification and vehicle identification number (VIN) verification. The data fields, source, consent or authority requirement, access period and retention differ by Service and will be described at the point of request or in a service notice. Biosec will update this Notice before introducing another verification category.

Verification information is returned only to the authorised requesting user and, where applicable, the Verification Subject. Biosec does not create or amend the underlying source record.

9. Sharing and recipients

- the requesting user and, where applicable, the Verification Subject;
- the relevant Source Institution and authorised data provider;
- cloud, hosting, communications, authentication, customer-support, analytics, cybersecurity and professional service providers acting under contract;
- payment gateways, banks, mobile-money providers and fraud-prevention services;

- group companies or a successor in a genuine restructuring, merger, investment or sale, subject to safeguards;
- lawyers, auditors, insurers and other professional advisers; and
- regulators, courts, law-enforcement bodies or public authorities where required by law or necessary to protect rights and security.

We do not sell or rent Personal Data and do not permit service providers to use it for unrelated marketing.

10. International transfers

Some infrastructure or service providers may be outside Ghana or permit authorised access from another country. We use a transfer mechanism allowed by applicable law, assess the destination and recipient, and apply contractual, technical and organisational safeguards. Where prior regulator approval, notification, adequacy, consent or another condition is required, we will satisfy it before the transfer.

Because Biosec operates the Platform from Nigeria, Personal Data submitted through the Service may be transmitted to, stored in or accessed from Nigeria. A verification provider or its sub-processors may also process information in other countries disclosed in the provider schedule. Biosec applies the transfer mechanism, approval, consent, contractual safeguards and security measures required by applicable law before a restricted transfer is activated.

Information about a material transfer and its safeguards may be requested from the DPO, subject to security and confidentiality restrictions.

11. Retention

Category	Indicative approach
Account and contract records	For the Account or contract relationship and a reasonable period afterwards for disputes, audit and legal obligations.
Payment and tax records	For the statutory accounting, tax, anti-fraud and dispute period.
Verification result	For the short access period displayed for the Service, then deleted or de-identified unless longer retention is legally required.
Consent and audit evidence	Long enough to demonstrate lawful processing, investigate misuse and resolve claims.
Security and technical logs	For a proportionate period based on risk, operational need and legal requirements.
Support, complaint and rights records	Until the matter is resolved and for the applicable legal-claims or accountability period.
Marketing preferences	Until withdrawal, plus a limited suppression record to respect the opt-out.

Exact periods are maintained in Biosec's retention schedule and may differ by Source Institution. Deletion from active systems may not immediately remove information from encrypted backups, which are isolated and overwritten through the backup cycle unless a legal hold applies.

Biosec's retention period applies to copies and logs controlled by Biosec. A verification provider or Source Institution may retain separate records for its legal, licensing, security, audit or dispute obligations. Biosec contractually limits provider retention where it acts as Biosec's processor and requests disclosure of material independent-controller retention.

12. Security

- role-based access, authentication and periodic access review;
- encryption in transit and at rest where appropriate;
- logging, monitoring, secure development and vulnerability management;
- segregation and restricted access for sensitive results;
- backup, recovery, incident response and business-continuity processes;
- vendor due diligence, contracts and confidentiality obligations; and
- staff privacy and security training, risk assessments and audits.

No electronic system is completely secure. Users must protect credentials, devices and downloaded results and report suspected compromise promptly.

13. Personal Data breaches

We maintain procedures to identify, contain, investigate and document Personal Data breaches. We notify the relevant regulator and affected persons within the time and circumstances required by applicable law. A notice may describe the nature of the breach, likely consequences, mitigation and contact point.

14. Your rights

- be informed about processing;
- request confirmation and access to Personal Data;
- request correction of inaccurate or incomplete data;
- request deletion where the legal conditions are met;
- request restriction or object to qualifying processing;
- withdraw consent;
- object to direct marketing;
- request portability where applicable;
- seek human review of qualifying solely automated decisions;
- complain to Biosec and the competent regulator; and
- seek compensation or another remedy where available.

A request to correct an official identity, vehicle or other source record may need to be made directly to the Source Institution. We will correct information controlled by Biosec and provide reasonable guidance.

15. Exercising rights and complaints

Email gh-info@e-citizen.africa with the right requested and sufficient Account or transaction details. We verify identity proportionately, ordinarily do not charge a fee, and respond within the period required by applicable law. A manifestly unfounded or excessive request may be limited, refused or charged where law permits.

You may complain to the Data Protection Commission of Ghana (DPC) using its current official channel at dataprotection.org.gh. Please confirm current contact details on the regulator's official site.

16. Children and persons lacking capacity

The Platform is not intended for Account holders under 18. A parent, guardian or authorised adult should use their own Account. Where consent is required for a child's Personal Data, we obtain or require verifiable authority from the parent or guardian unless law provides otherwise.

17. Cookies, analytics and similar technologies

The Platform may use strictly necessary, preference, analytics and advertising-measurement cookies or similar technologies. Non-essential technologies are used only with consent where required. Choices may be changed through the cookie panel or browser settings, although disabling necessary technologies may prevent core functions.

18. Marketing

We send marketing only where permitted and provide an unsubscribe method. Opting out does not stop receipts, security alerts, consent prompts or other operational messages. We keep a limited suppression record and do not use Verification Results for behavioural advertising.

19. Automated processing

The Platform may automatically compare identifiers, validate fields, route requests, detect fraud and return match or no-match responses. Biosec does not intend to make a solely automated decision producing legal or similarly significant effects about a Verification Subject unless the Service expressly states this, identifies the lawful basis and provides required safeguards.

20. Changes to this Notice

We may update this Notice for changes in law, guidance, source arrangements, technology or processing. The current version and effective date will be published. Material changes will be highlighted or communicated where reasonably practicable.
